Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```
channel protein I, cardiac - rat
cnate names: sodium channel protein (SkM2) alpha chain
les: Rattus norvegicus (Norway rat)
130-Mar-1990 #sequence_revision 30-Mar-1990 #text_change 20-Aug-1999
ssion: A33996; JQ0412
tt, R.B.; Cribbs, L.L.; Muglia, L.K.; Kephart, D.D.; Kaiser, M.W.
watl. Acad. Sci. U.S.A. 86, 8170-8174, 1989
s: Molecular cloning of a putative tetrodotoxin-resistant rat heart Na(+) chan rence number: A33996; MUD:90046760
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               : Primary structure and expression of a sodium channel characteristic of dene ence number: JQ0412; MUID:90166613 sion: JQ0412
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ule type: mRNA

Sourtum channel protein hHI, cardiac - human
N;Alternate names: tetrodotoxin-insensitive, voltage-dependent sodium channel, TTX-C;Species: Homo sapiens (man)
C;Date: 31-Dec-1993 #sequence_revision 31-Dec-1993 #text_change 20-Aug-1999
C;Accession: A38195
R;Gellens, M.E.; George Jr., A.L.; Chen, L.Q.; Chahine, M.; Horn, R.; Barchi, R.L.;
Proc. Natl. Acad. Sci. U.S.A. 89, 554-558, 1992
A;Title: Primary structure and functional expression of the human cardiac tetrodotox
A;Reference number: A38195; MUID:92115699
A;Status: nucleic acid sequence not shown
A;Molecule type: mRNA
A;Residues: 1-2016 <GELDA;Cross-references: GB:M77235; NID:9184038; PIDN:AAA58644.1; PID:9184039
A;Experimental source: heart
C;Superfamily: sodium channel protein

151964
sodium channel alpha chain SCN4A, skeletal muscle - human
C;Species: Homo sapiens (man)
C;Date: 24-May-1996 #sequence_revision 24-May-1996 #text_change 20-Aug-1999
C;Accession: 151964
A;Title: Primary structure of the adult human skeletal muscle voltage-dependent sodi.
A;Reference number: 151964
A;Status: preliminary; translated from GB/EMBL/DDBJ
A;Molecule type: DNA
A;Status: preliminary; translated from GB/EMBL/DDBJ

-!- SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN.
-!- TISSUE SPECIFICITY: EXPRESSED IN HUMAN ATRIAL AND VENTRICULAR
CARDIAC MUSCLE BUT NOT IN ADULT SKELETAL MUSCLE, BRAIN,
MYOMETRIUM, LIVER, OR SPLEEN.
-!- DOMAIN: THE SEQUENCE CONTAINS 4 INTERNAL REPEATS, EACH WITH 5
HYDROPHOBIC SEGMENTS ($1,$2,$3,$5,$6) AND ONE POSITIVELY CHARGED
SEGMENT ($4). SEGMENTS ($1,$2,$3,$5,$6) AND ONE POSITIVELY CHARGED
CHARACTERIZED BY A SERIES OF POSITIVELY CHARGED AMINO ACIDS AT
EVERY THIRD POSITION
-!- DISEASE: DEFECTS IN SCN5A ARE THE CAUSE OF LONG QT SYNDROME TYPE 3
(LQT3), AN AUTSOOMAL DOMINANT CARDIAC DISEASE CHARACTERIZED BY
RECURRENT SYNCOPE AND SUDDEN CARDIAC DEATH.
-!- MISCELLANBOUS: NA - CHANNELS IN MAMMALIAN CARDIAC MEMBRANE HAVE
FUNCTIONAL PROPERTIES QUITE DISTINCT FROM NA+ CHANNELS IN NERVE
                                                                                                                             ARE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (POTENTIAL). (POTENTIAL). (POTENTIAL).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                (POTENTIAL)

CHARGED

2-3 SMALLER ONES. THIS SEQUENCE REPRESENTS A LARGE POLYPEPTIDE.
SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN.
DOMAIN: THE SEQUENCE CONTAINS 4 INTERNAL REPEATS, EACH WITH 5 HYDROPHOBIC SEGMENTS (S1, S2, S3, S5, S6) AND ONE POSITIVELY CHARGES SEGMENT (S4). SEGMENTS S4 ARE PROBABLY THE VOLTAGE-SENSORS AND 1 CHARACTERIZED BY A SERIES OF POSITIVELY CHARGED AMINO ACIDS AT SUMILARITY: TO OTHER SODIUM CHANNEL PROTEINS.

AND

SUBUNIT: THE SODIUM CHANNEL CONSISTS OF A LARGE POLYPEPTIDE

                                                                                                                                                                                                                                                                                                                                                                                                      SUBUNIT: THE SODIUM CHANNEL CONSISTS OF A LARGE POLYPEPTIDE AND 2-3 SMALLER ONES. THIS SEQUENCE REPRESENTS A LARGE POLYPEPTIDE.
SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN.
DOMAIN: THE SEQUENCE CONTAINS 4 INTERNAL REPEATS, EACH WITH 5 WITOROPHOBLIC SEGMENTS (SI.52,53,55,56) AND ONE POSITIVELY CHARGED SEGMENT (S4). SEGMENTS S4 ARE PROBABLY THE VOLTAGE-SENSORS AND ARE CHARACTERIZED BY A SERIES OF POSITIVELY CHARGED ANINO ACIDS AT
                                                         01-AUG-1988 (Rel. 08, Last sequence update)

SUBUNIT: THE SODIUM CHANNEL CONSISTS OF A LARGE POLYPEPTIDE AND 2-3 SMALLER ONES. THIS SEQUENCE REPRESENTS A LARGE POLYPEPTIDE. SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN.

DOMAIN: THE SEQUENCE CONTAINS 4 INTERNAL REPEATS, EACH WITH 5 HYDROPHOBIC SEGMENTS ($1,$2,$3,$5,$6) AND ONE POSITIVELY CHARGED SEGMENT ($4). SEGMENTS $4 ARE PROBABLY THE VOLTAGE-SENSORS AND ARE EVERY THIRD POSITION.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        t
                                                                 1613
                                                                                                                                  1673
   ----HCNSSSQDS 1553
                 FUNCTION: THIS PROTEIN MEDIATES THE VOLTAGE-DEPENDENT SODIUM ION PERMEABILITY OF EXCITABLE MEMBRANES. ASSUMING OPENED OR CLOSED CONFORMATIONS IN RESPONSE TO THE VOLTAGE DIFFERENCE ACROSS THE MEMBRANE, THE PROTEIN FORMS A SODIUM SELECTIVE CHANNEL THROUGH WHICH NA++ IONS MAY PASS IN ACCORDANCE WITH THEIR ELECTROCHEMICAL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Malo M.S., Blanchard B.J., Andresen J.M., Srivastava K., Chen X.N., Li X., Jabs E.W., Korenberg J.R., Ingram V.M.; "Localization of a putative human brain sodium channel gene (SCNIA)

                        DISEASE: DEFECTS IN SCNIA ARE THE CAUSE OF GENERALIZED EPILEPSY WITH FEBRILE SEIZURE PLUS TYPE 2 (GENE4-2). THIS AUTOSONAL DOMINANT DISORDER IS CHARACTERIZED BY FEBRILE SEIZURES IN CHILDREN AND AFEBRILE SEIZURES IN ADULTS. PENETRANCE IS INCOMPLETE AND A LARGE INTRAFAMILIAL VARIBBILITY OF THE PHENOTYPE IS OBSERVED. SIMILARITY: TO OTHER SODIUM CHANNEL PROTEINS.
                                                                                                                                                                                                                                                                                                                                                                                                                        Pfam; PF00520; ion_trans; 4.

It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation the European Bioinformatics Institute. The are no restrictions on its use by non-profit institutions as long as its content is in no way
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  2-3 SMALLER ONES. THIS SEQUENCE REPRESENTS A LARGE POLYPEPTIDE AND 2-3 SMALLER ONES. THIS SEQUENCE REPRESENTS A LARGE POLYPEPTIDE. SUBGLELLOLAR LOCATION: INTEGRAL MEMBRANE PROTEIN.

ALTERNATIVE PRODUCTS: 2 ISOPORMS; 1 (SHOWN HERE) AND 2; ARE PRODUCED BY ALTERNATIVE SPLICING.

DOMAIN: THE SEQUENCE CONTAINS 4 INTERNAL REPEATS, EACH WITH 5 HYDROPHOBIC SEGMENTS ($1,$2,$3,$5,$6) AND ONE POSITIVELY CHARGED SEGMENT ($4). SEGMENTS                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Chen Y., Dale T.J., Romanos M.A., Whitaker W.R., Xie X., Clare J.J.; "Cloning, distribution and functional analysis of the human brain type III sodium channel from human brain."; submitted (DEC-1999) to the EMBL/GenBank/DDBJ databases.

PERMEABILITY OF EXCITABLE MEMBRANES. ASSUMING OPENED OR CLOSED CONFORMATIONS IN RESPONSE TO THE VOLTAGE DIFFERENCE ACROSS THE MEMBRANE, THE PROTEIN FORMS A SODIUM SELECTIVE CHANNEL THROUGH WHICH NA++ IONS MAY PASS IN ACCORDANCE WITH THEIR ELECTROCHEMICAL
Mammalia; Eutheria; Rodentia; Sciurognathi; Muridae; Murinae; Rattus
NCBI_TaxID=10116;
                                                                                                                          SEQUENCE FROM N.A. MEDITHE-86146901; PubMed=3754035; Noda M., Ikeda T., Kayano T., Suzuki H., Takeshima H., Kurasaki M., Takahashi H., Numa S.; "Existence of distinct sodium channel messenger RNAs in rat brain.";
                                                                                                                                                                                                                                                                                                                                                                         Nature 320:188-192(1986).
-i- FUNCTION: THIS PROTEIN MEDIATES THE VOLTAGE-DEPENDENT SODIUM ION
```

|-

1 1

SUBGINIT: THE SODIUM CHANNEL CONSISTS OF A LARGE POLYPEPTIDE AND 2-3 SMALLER ONES. THIS SEQUENCE REPRESENTS A LARGE POLYPEPTIDE.
SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN.
DOMAIN: THE SEQUENCE CONTAINS 4 INTERNAL REPEATS, EACH WITH 5 HYDROPHOBIC SEGMENTS (S1, S2, S3, S5, S6) AND ONE POSITIVELY CHARGED SEGMENT (S4). SEGMENTS S4 ARE PROBABLY THE VOLTAGE-SENSORS AND ARE CHARACTERIZED BY A SERIES OF POSITIVELY CHARGED AMINO ACIDS AT EVERY THIRD POSITION.
SEMENTY: TO OTHER SODIUM CHANNEL PROTEINS.
SIMILARITY: COUTAINS 1 1Q DOMAIN.

PERMEABILITY OF EXCITABLE MEMBRANES. ASSUMING OPENED OR CLOSED CONFORMATIONS IN RESPONSE TO THE VOLTAGE DIFFERENCE ACROSS THE MEMBRANE, THE PROTEIN FORMS A SODIUM-SELECTIVE CHANNEL THROUGH WHICH NA++ IONS MAY PASS IN ACCORDANCE WITH THEIR ELECTROCHEMICAL Noda M., Numa S.;
"Structure and function of sodium channel.";
J. Recept. Res. 7:467-497(1987).
-I- FUNCTION: THIS PROTEIN MEDIATES THE VOLTAGE-DEPENDENT SODIUM ION GRADIENT

SUBUNIT: THE SODIUM CHANNEL CONSISTS OF A LARGE POLYPEPTIDE AND 2-3 SMALLER ONES. THIS SEQUENCE REPRESENTS A LARGE POLYPEPTIDE. SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN.

DOMAIN: THE SEQUENCE CONTAINS 4 INTERNAL REPEATS, EACH WITH 5 DOMAIN: THE SEQUENCE CONTAINS 4 INTERNAL REPEATS, EACH WITH 5 SEGMENTS (S.1.52, S3.55, S6) AND ONE POSITIVELY CHARGED SEGMENT (S4). SEGMENTS S4 ARE PROBABLY THE VOLTAGE-SENSORS AND ARE CHARACTERIZED BY A SERIES OF POSITIVELY CHARGED AMINO ACIDS AT

EVERY THIRD POSITION.
SIMILARITY: TO OTHER SODIUM CHANNEL PROTEINS.
SIMILARITY: CONTAINS 1 IQ DOMAIN.

Neuron 3:33-49(1899).
-1- FUNCTION: THIS PROTEIN MEDIATES THE VOLTAGE-DEPENDENT SODIUM ION
PERMEABILITY OF EXCITABLE MEMBRANES. ASSUMING OPENED OR CLOSED
CONFORMATIONS IN RESPONSE TO THE VOLTAGE DIFFERENCE ACROSS THE
MEMBRANE, THE PROTEIN FORMS A SODIUM-SELECTIVE CHANNEL THROUGH
WHICH NA+ IONS MAY PASS IN ACCORDANCE WITH THEIR ELECTROCHEMICAL
GRADIENT. THIS SODIUM CHANNEL MAY BE PRESENT IN BOTH DENERVATED
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Trimmer J.S., Cooperman S.S., Tomiko S.A., Zhou J., Crean S.M., Boyle M.B., Kallen R.G., Sheng Z., Barchi R.L., Sigworth F.J., Goodman R.H., Agnew W.S., Mandel G.; Primary structure and functional expression of a mammalian skeletal

        SUBUNIT: MUSCLE SODIUM CHANNELS CONTAIN AN ALPHA SUBUNIT AND A SMALLER BETA SUBUNIT.
SUBCELLOLAR LOCATION: INTEGRAL MEMBRANE PROTEIN.
SUBCELLOLAR LOCATION: INTEGRAL MEMBRANE PROTEIN,
HYDROPHOBIC SEGMENTS (31,52,53,55,56) AND ONE POSITIVELY CHARGED SEGMENT (54). SEGMENTS S4 ARE PROBABLY THE VOLTAGE-SENSORS AND ARE CHARGED BY A SERIES OF POSITIVELY CHARGED AMINO ACIDS AT SUMMER THIRD POSITION.
SIMILARITY: TO OTHER SODIUM CHANNEL PROTEINS.
SIMILARITY: CONTAINS 1 1Q DOMAIN.
                                                                                                                                                                                                                                                                                                                                                             vort; Voltage-gated channel;
